

SOURCE VISION

PHASE 1 & PHASE 2 MODULE OVERVIEW

PREPARED FOR

Source Vision / Blue Virtue

White-label marketing operations platform

DATE	2 September 2026
VERSION	2.0 — revised after Blue Virtue Scope Review & Alignment Notes (31 August 2026)
PROJECT	Source Vision — MVP Demo & Proposed Full Platform
PREPARED BY	Vijay Dabhi, NexusLink Services India Pvt. Ltd.

1. Purpose

This document lists what Source Vision contains in each of its two phases, at module level, revised after Blue Virtue's Scope Review & Alignment Notes of 31 August 2026. It is a scope reference — not a technical specification and not a quotation.

Phase 1 is the Acquire demo. Phase 2 is presented as the Proposed Full Platform / Future Product Architecture — a working module framework for the future product, not a committed build.

At a glance

Phase 1 — 24 screens across three waves. Static demo, sample data, no database. Wave 1 (12 screens) tells the full commercial story in demo storyline order.

Phase 2 — Proposed Full Platform / Future Product Architecture: 24 framework modules plus 2 roadmap items. Accepted as a working framework only; each module remains subject to review and approval.

2. Phase 1 — MVP Demo

Phase 1 is the Acquire demo: designed screens with click-through navigation and sample data. Nothing inside a page performs a real action — forms do not submit and figures do not change. Dummy data only; no existing customer, consumer or GRS data is used.

The September demo is built around one test: a potential buyer should understand the full commercial loop of Source Vision — how they can brand the platform, offer services, receive a campaign request, generate leads and show results — in approximately 10 minutes. Wave 1 is ordered to tell that story end to end.

3. Demo storyline — Wave 1 order

Wave 1 screens are built and presented in the order below, so a guided walkthrough moves naturally from a customer's first login to the platform owner's white-label controls.

Step	Storyline stage	Wave 1 screen(s)
1	Login	Login & Role Switcher
2	Customer	Customer Dashboard
3	Services / Plans	Services Catalogue · Marketing Packages · Marketing Plans
4	Request	Campaign Request Flow
5	Campaign / Lead Gen	Scratch Game / Lead Generation
6	Results	Campaign Reporting Dashboard
7	Admin	Admin Dashboard
8	White-label	White-Label Configuration · Platform Settings

4. Phase 1 module list

#	Module / Screen	What it covers
WAVE 1 — Committed for the September demo (in demo storyline order)		
1	Login & Role Switcher	Branded login screen plus a demo switch between the Customer Portal, Admin Portal and Platform Settings views.
2	Customer Dashboard	The main customer screen: active plan, services, campaigns, leads, newsletter results, activity.
3	Services Catalogue	The eight marketing services shown as selectable cards.
4	Marketing Packages	Eight single-service monthly subscription cards — shown as example monetisation models.
5	Marketing Plans	The five bundled plans — Starter, Growth, Full Service, Franchise, Agency — shown as example monetisation models, configurable by the platform owner.
6	Campaign Request Flow <i>Moved forward from Wave 2</i>	Step-by-step request screen with a visible status pipeline — how a customer requests a campaign from the platform owner.
7	Scratch Game / Lead Generation <i>Moved forward from Wave 2</i>	Scratch campaigns, participants, emails collected and conversion — how leads are generated for a customer.
8	Campaign Reporting Dashboard <i>Moved forward from Wave 2</i>	Cross-channel results — email, leads, landing pages, advertising — how measurable results are shown.
9	Admin Dashboard	Back-office overview with sidebar navigation, key statistics and summary tables.
10	White-Label Configuration	Branding settings screen — platform name, logo, colours, domain, language.
11	Platform Settings	Platform Owner view — modules, integration status, system status and product roadmap. (Previously “Development / Settings Portal”.)
12	Public Homepage <i>Deprioritised</i>	Marketing site that sells the platform — hero, feature cards, statistics and calls to action. Deprioritised: remains in Wave 1 but is completed after the storyline screens.
WAVE 2 — Added after the demo build		
13	Landing Page / Lead-Gen Overview	Example landing pages with views, sign-ups and leads.
14	Notifications Panel	An “Action Required” list of pending items.
15	Service Landing Pages	A reusable service page template, applied to each of the eight services.
16	Upgrade Plan Page	Plan comparison and upgrade screen.
WAVE 3 — Depth screens, as time allows		
17	Newsletter Overview	Sent, draft and planned newsletters with performance figures.
18	Admin — Customers	Customer accounts list and detail view.
19	Admin — Subscriptions & Pricing	Plan and service management screens.

#	Module / Screen	What it covers
20	Admin — Leads & Requests	Lead list with sources, and the incoming request queue.
21	Admin — Campaigns & Reports	Campaign list and reporting screens.
22	Admin — User Management	Users, roles and permissions screens.
23	Content Library	Shared assets and templates — simple asset organisation.
24	Contact & My Account	Public contact page and the customer profile screen.

• Also included in Phase 1

- Design system setup — brand colours, typography and a reusable component library.
- Sample data set and content pass across every screen — dummy data only; no existing customer, consumer or GRS data.
- Testing, deployment to the demo environment (Blue Virtue VPS, source-vision.com, Cloudflare DNS — MVP infrastructure only), and handover documentation.
- Development & IP Register maintained from the first implementation work.

• What changed from version 1.0

- Wave 1 re-ordered to follow the buyer demo storyline: Login → Customer → Services / Plans → Request → Campaign / Lead Gen → Results → Admin → White-label.
- Campaign Request Flow, Scratch Game / Lead Generation and Campaign Reporting Dashboard moved from Wave 2 into Wave 1, at demo depth.
- Public Homepage kept in Wave 1 but deprioritised — completed after the storyline screens.
- “Developer view / Development Portal” renamed to Platform Settings (Platform Owner view). The three demo areas are Customer Portal, Admin Portal and Platform Settings.
- Packages, plans and pricing are presented as example monetisation models, not fixed Source Vision commercial terms.

5. Phase 2 — Proposed Full Platform / Future Product Architecture

The module framework below describes how the Phase 1 screens could become a working, multi-tenant product. It is a proposed future architecture: it is not an approved development scope and not a commitment to build all listed modules. Each module remains subject to module-by-module review, IP clarification, technical validation and commercial approval.

Technology

Laravel + Vue is NexusLink's proposed stack for the full platform, accepted subject to final technical architecture approval, portability, documentation and transferability requirements.

#	Module	What it covers
STRATEGIC FOUNDATION — priority		
1	Multi-Tenancy & White-Label Engine	The strategic foundation of the platform: one shared, maintainable codebase; tenant separation; custom domains; per-tenant branding; roles; and data separation between tenants.
2	Authentication & Accounts	Real registration, login, verification, password reset and account states.
3	Roles & Permissions	Working access control for platform owner, admin, staff and customer roles.
COMMERCIAL CORE		
4	Customer Management	Full account records, profiles, assigned services and history.
5	Services Catalogue Management	Admin-controlled service definitions, pricing and availability.
6	Packages & Plans Engine	Working subscriptions — subscribe, upgrade, add-ons, renewals, usage. Pricing, plan names, service combinations and availability configurable by the platform owner.
7	Billing & Payments	Payment gateway, recurring billing, invoices and VAT handling.
MARKETING OPERATIONS		
8	Campaign Management	Real campaign records, scheduling, assets and ownership.
9	Campaign Request Workflow	Live request submission, assignment, approvals and notifications.
10	Email & Newsletter Engine	Lists, templates, composer, scheduling, sending and tracking. Later design: provider model, sending domains, volume tiers, deliverability, variable email costs and tenant economics to be documented before this module is approved. No production sending in the MVP.
11	Contacts & Subscribers	Subscriber management, imports, consent and unsubscribes.
12	Scratch Game Engine	A playable scratch mechanic with prizes, entries and lead capture.
13	Landing Page Builder	Publishable landing pages with forms and lead capture.
14	Leads Management	Lead records, sources, qualification and export.

#	Module	What it covers
INSIGHT & CONTENT		
15	Reporting Layer	A reporting layer over platform data, with exportable branded reports. The analytics dashboard itself is treated as a component to be integrated into the platform; Blue Virtue's available dashboard technology is assessed before any custom analytics build is considered.
16	Content Library	Simple asset organisation — upload, tag and reuse assets and templates across campaigns. The legacy GRS folder module is excluded from the Source Vision core proposition.
17	Notifications & Email Dispatcher	In-app alerts and transactional email templates.
18	Admin Back-Office	Fully working versions of every admin module, plus audit logging.
PLATFORM		
19	Core Integrations	Integrations the platform depends on to operate — email sending provider, payment gateway, tenant domain / DNS.
20	Optional Third-Party Integrations	Advertising, analytics, CRM and print connectors — each treated as a separate item, scoped and approved individually.
21	API Framework	Public / partner API and webhooks, with authentication and documentation.
22	Generic Data Import & Migration Tools	Standard-format import (e.g. CSV) of contacts, lists and templates into a tenant. No migration of GRS lists, templates, customer data or consumer data is assumed; any GRS-specific migration requires separate legal and commercial approval.
23	Compliance & GDPR	Consent, data export and deletion, retention and EU data handling.
24	Infrastructure & DevOps	Environments, deployment pipeline, queues, backups and monitoring.
ROADMAP / OPTIONAL — outside core scope		
R1	AI Campaign Assistant	Campaign suggestions, content help and upsell recommendations. Optional future module.
R2	Print Portal / Print.com	Print services as a roadmap item or optional integration, unless explicitly approved later.

• What changed from version 1.0

- Phase 2 is presented as “Proposed Full Platform / Future Product Architecture” — a working module framework, not a committed build.
- Multi-Tenancy & White-Label Engine moved to the top as the strategic foundation.
- “Data Migration from GRS” replaced with “Generic Data Import & Migration Tools” — no GRS data assumed.
- Reporting & Analytics refined to a Reporting Layer; the analytics dashboard is treated as an integrated component, with Blue Virtue's available dashboard technology assessed first.
- Integrations Layer split into Core Integrations, Optional Third-Party Integrations and API Framework.
- Content Library clarified as simple asset organisation; legacy GRS folder module excluded.
- Email & Newsletter Engine marked as later design — provider model, sending domains, volume tiers, deliverability, variable email costs and tenant economics to be documented before approval.
- AI Campaign Assistant and Print Portal moved to Roadmap / Optional.

6. Notes

Please note

Phase 1 direction is approved by Blue Virtue; the Wave 1 order in this document applies the requested prioritisation around the buyer demo storyline.

Phase 2 is accepted as a working module framework only and is presented as a proposed future architecture, not a committed build.

No Source Vision scope assumes GRS participation or the transfer of GRS customers, data, technology or IP unless confirmed in writing.

A Source Vision Development & IP Register (Component · Origin · Developer · Source / Dependency · Repo / Location · Status) is maintained from the first implementation work. Entries in the register do not imply any ownership or revenue position for any party.

Next step

Confirm the Wave 1 order for the September demo, and confirm the reworded Phase 2 framework as the agreed working structure for future discussion.

Warm regards,

Vijay Dabhi
